Dear Nebraska Farmers, Ranchers and Agribusinesses:

The following narrative and tables are from recently published reports by USDA's Agricultural Statistics Board. These data are direct results of information provided by Nebraska producers and agribusinesses to the surveys conducted each month by this office.

Thank you for your response to these surveys.

### New Satellite Image Crop Maps Available for Nebraska

The U.S. Department of Agriculture's National Agricultural Statistics Service (NASS) has released satellite image maps depicting crop patterns for 2011. These images, referred to as the Cropland Data Layer, can be used in geographic information system (GIS) applications.

When the satellite image maps are used in a GIS and combined with other data layers such as soil, transportation networks, or weather contours, they can be helpful in watershed analysis, soils utilization over large areas, and crop rotation analysis.

Maps are available by region; no individually reported data from any farm is included or derivable from the cropland data layer maps available from the internet. This aligns with NASS policy to strictly protect the confidentiality of farmer reported data.

To download the free maps, visit the NASS Web site at <http://www.nass.usda.gov/research/Cropland/SARS1a.htm> and click on the link for the region you want. For additional information, call USDA's National Agricultural Statistics Service Nebraska Field Office at 1-800-582-6443.
